

Amongst Giants - Deselco-Pumps at the ACHEMA 2009 – Hall 8

For the first time **DeSelco** showed in co-operation with the Koller company from Austria its trendsetting program at the ACHEMA - the world's largest equipment fair for chemical engineering. The week-long meeting of companies and exhibitors from various fields of industry offered as expected the chance to get in contact and to exchange and gain information.

As well as at the Hannovermesse shortly before both the orbital and the hose pump technology caught the attention of many visitors. The considerably strong interest on the part of the pharmaceutical and printing industry, the food technology and the plant engineering is owed to **DeSelco's** extremely efficient pumps with an excellent price-performance ratio. So the size 5-orbital pump with a delivery rate of up to 28 cubic meters per hour received many inquiries. Also the hose pump system, which experienced a decisive innovation, outrivals the other conventional systems.

The international distribution partners who joined Mister Fischer at his stand in hall 8 had the opportunity to talk to their customers and supported **DeSelco** in counseling issues. New customers could be recruited, distributors from abroad showed interest regarding a co-operation, and furthermore users of other pump systems could convince themselves about optimization possibilities while using **DeSelco** pumps.

DeSelco is very satisfied with the result of the ACHEMA and looks forward to a crisis-proof future. With the new project - the OEM-spiral pump which will be produced in co-operation with the Koller company - the date for the next exhibition (Drinktec in autumn) is fixed and a further growth within the field of mass-production is guaranteed.
