

## Exhibition at the Hannovermesse 2008

Within the scope of the INTERKAMA the new positive displacement pumps with spiral mechanism were introduced at the Hannovermesse 2008 for the first time. Numerous customers from different fields of industry took their chance to get information about the new pumps.

### “Industriepreis 2008” for DeSelco in the category engineering

The offered pumps attracted great attention with the visitors from different industrial sectors. Because of the excellent characteristics of the new pumps many contacts to distribution partners and potential customers could be made.

The **DeSelco** spiral pump was awarded the “Industriepreis 2008” in the category engineering.

One of the leading advantages of the spiral pump is its flexibility regarding customer needs because of the wide range of pump types. So the contacts and the information that could be gained will promote the company’s future business success.
